

Based on government credentialing and certification process measurements, AZZLY® has emerged as one of the most innovative and technologically advanced patient care management™ systems in healthcare today.

Providing a fully integrated Electronic Health Record (EHR), Practice Management (PM) and Patient Health Record (PHR) system, AZZLY's® IT operating system is: ONC-ATCB Certified Complete and CMS 2011 PQRS qualified. AZZLY® also remains one of only thirteen of the original twenty-seven qualifying companies to meet all measures of the CMS 2011 PQRS vetting process. With more than 400 companies now competing in the EHR space, AZZLY® is applying new-technology and business-process innovation to lead the way in EHR/EMR design and implementation.

Based on a highly affordable, non-restrictive subscription pricing model and technology infrastructure that requires nothing more than a computer and internet connection, AZZLY's® One Click Patient Care Management™ provides intuitive functionality that adapts to existing user behavior while promoting ease of use and unsurpassed clinical and business-process outcomes.

Through a simple sign on interface that accesses a single integrated database; physicians, clinicians and administrative personnel have access to the most comprehensive clinical and business data, analytics and communications tools necessary to run a contemporary medical practice ... easily and profitably.

A single computer screen "dashboard" manages scheduling, registration, patient encounters, prescriptions, labs, radiology, order sets, billing, claims and so much more ... without having to toggle between multiple screens and/or data sites.

Although, originally designed for the 1-25 ambulatory provider practice, AZZLY's® technology architecture and business-process innovation provides IPAs and multi-location integrated health delivery systems with a multitude of scalable product and process features that address interoperable and communications "gaps" inherent with many legacy and non-fully integrated cloud-based EHR systems.

As the industry's first fully integrated new technology, cloud-based EHR /Practice Management platform solution, we like to remind our clients, prospects and affiliates that: "AZZLY® didn't migrate to the cloud ... we were born there."

Thank you for your interest and we welcome the opportunity to work with you.

Sincerely,
Coletta L. Dorado, President and CEO
